MIDI PERFORMANCE SERIES

MIDI player™

Intelligent Software For Use With The Passport MIDI Interface™

MIDI Player is a computerized music presentation system for MIDI/4 or MIDI/4plus recordings. With MIDI Player, you can arrange and digitally store a whole set or album of music on computer disk and play it back through your MIDI synthesizers in the order you designate. Now with just your synthesizer, personal computer, and MIDI Player, you can create a multi-instrument back-up for solo performances.

Use MIDI Player for instant accompaniment for performing or practice; create your own albums or demos. For a different sound, reorchestrate arrangements by changing presets on your MIDI synthesizer. As your music plays, the video screen will dance with high resolution graphics directly keyed to the tempo and pitch values of the musical score, creating a dramatic visual presentation. Whether you use MIDI Player with your own recordings or those provided, you'll enjoy the same exceptional sound quality that today's MIDI synthesizers provide.

- Contains 8 commercial arrangements on the program disk
- Lets you create your own albums of MIDI/4 and MIDI/4plus recordings on separate disks
- Handles 8 songs per disk
- Plays back arrangements in the order you designate
- Synchronizes music playback with real time computer graphics

Passport Designs Inc. is the first software company in the world to be entirely dedicated to the development of music software. Our commitment to providing musicians with the most advanced technology available has led to the development of our MIDI Performance, Printing, and Education Series of integrated MIDI software programs. Look for other Passport music programs at fine music stores worldwide.
